

DRILLING / TAPPING / REAMING / BORING / BURISHING complete solution with minimized cycle time less than CNC MACHINE

Auto-Feed Drilling and Auto-Feed Tapping machine.

We provide complete solution for you drilling / tapping / reaming / burnishing etc.. Operations, with tooled up machine.

Once your machine is set in our factory, start your production when its in you factory.

Need not to do R&D in those operations in which we are experts.

We have supplied 1000's of machines tooled up and with minimized cycle time.

Drilling /Tapping with multi spindle is also possible, drilling with multi spindle will reduce the drilling time.

If you have a CNC or SPM and Searching for second operation Drilling and Tapping in Mass or Batch Production, send you details, we will make give complete solution with our Auto-Feed machine

Components handled by us

Various types of industry components are handled

- Automobile parts
- Valves parts
- Pump parts
- Air-condition parts
- Hydraulic/Pneumatic parts

And where ever mass and batch production of drilling and Tapping is processed in CNC or in Drilling m/c

MULTI SPINDLE DRILLING HEADS

We can make fixed PCD, Multi drills with uneven hole dimensions, with lot of drills of different dimensions as per the customer requirement

Variable PCD

This variable PCD Multi spindle drilling head depends upon three things

1. PCD
2. Drill size
3. No of Drills

It can be used in our machines and with the variable clamping fixtures. We can archive the cycle time, double or triple in the same

R&D

Our R&D-design Dept are regularly developing the design of the Auto-Feed Drilling machine & Auto-Feed Tapping machine, Multi Spindle Drilling Head, Drilling heads and Deep Hole Drilling Machine. Soon Servo motor Drilling and Tapping will be introduced.

We are also in the process of making fully atomized machine, even you don't need a full time operator for these machines; Feed the component in vibrator and then all the process goes on till component collected in a tray.
